The PROCON connectors offers a good attenuation. With an insertion loss of <1,5 dB it outperforms the NATO specification (<2,5 dB).

The PROCON Mini XLR is one of the smaller expanded beam connectors available on the market today. The low profile allows it to be used even in the most cramped environments and installations.

PROCON has the advantage of being produced inhouse in Åled, Sweden which also means a stable delivery performance and we are able to promise shorter leadtimes.

Like the other connectors in the Micropol PROCON expanded beam family, it is compatible with other mini sized expanded beam connectors on the market.
