PRODUCT CATALOGUE

WE ARE MICROPOL

At Micropol we combine unique design and production technology to offer more complex and compact solutions for passive fiber optics than any other supplier on the market. Our work is of extreme high precision and we are known for providing short lead times, high quality and customized applications.

Regardless of the application, we have the knowledge and the capacity of manufacture the product needed – either according to the customer's specification or as a specially tailored solution. All our products are manufactured in our own facility in Sweden.

Our customers are found in a large variety of markets where advanced fiber optic solutions are crucial. Our products are used in a whole range of technologies, from complex fiber optic networks for telecom and data communication, to advanced sensor systems for industrial (e.g. mining, forest and offshore), medical and military applications

We are proud to be a vital link between the information community of today and that of the future. We have always built our success on long term relations, knowledge and solid craftsmanship to provide the highest quality and the best service.

INFORMATION AT THE SPEED OF LIGHT

Something we can say with certainty about the future is that more and more information will be sent digitally. In Telecom & Broadcast we often sell key parts of the network where quality requirements are the highest. Complex fiber optic networks to connect people. At the speed of light.

We provide solutions for passive fiber optic networks for data and telecom. Our fiber optic cables and connectors are used in data centers, backbones and TV broadcast.

We manufacture according to a joint agreement or according to your requirements. All of our optical cabling is produced in Sweden and all products are thoroughly tested before delivery.

We offer timesaving solutions of high quality such as patchcords, pre manufactured ODF boxes (Optical Distribution Frame) and interconnection cables. You name IT, we make IT. We have the capacity to manufacture in both small and larger volumes. Micropol's state of the art polishing technique will guarantee the highest degree of product satisfaction.

As a LEMO certified service partner, Micropol manages all repairs and refurbishments of Lemo connectors and cables, with customers from all Nordic countries.

LIGHTFRAME MODULAR - ODF

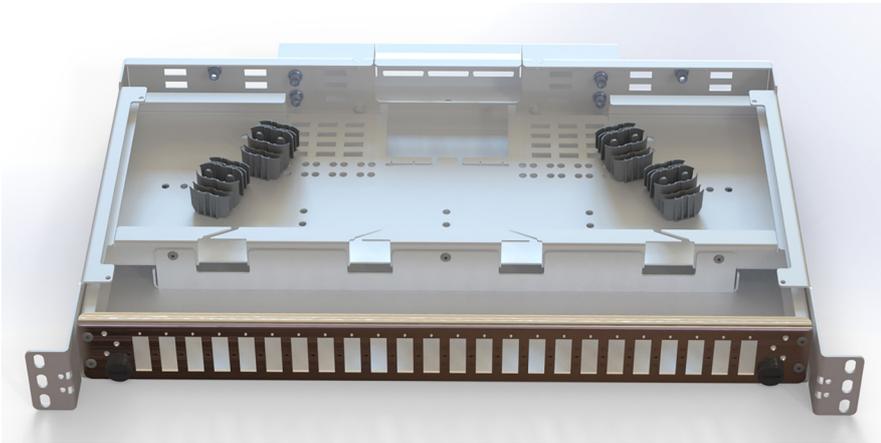

Lightframe Modular is a stackable ODF that is just 44 mm high (1U). Lack of space continues to be a challenge when fibernets expand. Lightframe Modular is a surface efficient solution which creates more space in nodes and data centers.

Lightframe Modular is designed to save time on site. The back piece on the box is pre-assembled. If you need to remove it, you easily snap it off. The cable is fixed by the next unit or by the lid.

The ODF is designed with a protective frame to facilitate fixing of the fibers and for marking.

Lightframe Modular is delivered with tailor made welding sleeve holders, which makes it easy to weld. The welding sleeve is placed where the installer finds it suitable to minimize strain on the fiber. This means that you do not need a splice tray in the box.

By delivering the Lightframe modular in four different variants and with the customized numbering on the front (vertical or horizontal marking), Lightframe Modular is prepared for the future's fibre nets.

TECHNICAL SPECIFICATION	
Measurements	482x301x44 mm
Height	1 unit 44 mm 2 units 88 mm 4 units 176 mm

FEATURES

- Modular and only 44mm high
- The welding sleeve holder is placed where the installer finds it suitable to minimize strain on the fiber.
- The cable cover is fixed by the next unit or by the lid
- The ODF is equipped with a protective frame to facilitate fixing of the fibers and for marking
- Customized print on the front (vertical or horizontal)

Lightframe modular is available in the following variants :

1. ODF
2. ODF with adapters
3. Pre-assembled ODF with pigtails
4. Pre fabricated ODF

Contact us for more information about our Lightframe Modular variants.

EVENT REEL

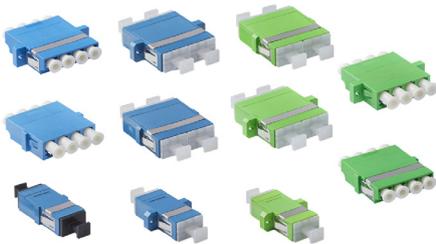

Description: The event fiber reel is adapted for tough environments which makes it excellent for sporting events, concerts and live broadcasts. The event reel is also used as an emergency solution in the event of an unwanted cable cut or other fiber breaks.

The low weight of the product and length adjustment mean that several city networks and media production companies have different variants to cover the need of fiber in different types of events.

The event reel is customized according to your needs.

CLEANING KIT

Content: Cleaning sticks, cleaning wipes, cleaning fluid, flash light

Measurement: 20 x 12 x 12 cm.

Weight: 0,78 kg.

Description: Does not contain any hazardous substances that requires extra documentation or extra costs in air transport. Cleaning fluid is safe to bring on air transport and is self-extinguishing. Non hygroscopic cleaning fluid to clean optical glass and plastic fiber. POF. (A hygroscopic liquid absorbs moisture from ambient air leading to dirt particles contaminating the liquid, which can cause scratches on the fiber surface) Refill list for easy ordering of additional items when needed.

CLEANING PEN "ONE-CLICK"

Description: A mechanical cleaning tool designed to clean opto connectors in ODF's or adapters. Equipped with a first class cleaning wire designed to easily and safely remove dirt from the contact surface. Cleans with a click. Extendible for access to hard to reach areas. Suitable for telecom centers, data centers, CATV, FTTx-networks, outside broadcasting, military and civil aviation industry.

Quantity of cleanings per pen: 525+ (MTP / MPO 600+).

REFERENCE FIBER

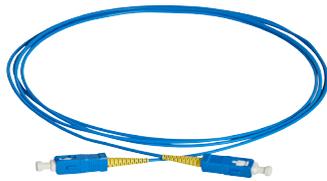

Reference fiber: The reference fiber is clearly marked and measurement protocol and interferometer protocol are supplied. Each case is individually numbered and all measurement data is saved in Micropol's database. Relevant protocols are updated in the event of repair/replacement of connectors. Other types of reference fiber are also manufactured. Use the reference fiber with your choice of fiber.

OUR HISTORY

Micropol has delivered high quality fiber optic products and solutions for more than 30 years. However, the event that lay the foundation to the company dates even further back in time.

In the morning of October 28, 1981, the Soviet submarine U137 was reported to have ran aground in the Karlskrona archipelago, an event that became world news. Anders Andersson, the founder of Micropol, was working at the time in the Royal Air Force. During the 1970's, Anders read about a new technique called fiber optics. He realized its future potential and requested with his superiors to invest time and funding to learn more. Much to his regret the request did not generate much interest.

The grounded Soviet submarine however, brought a light to the use of fiber optics as Sweden during the years to come, had to relate on US Navy sonar equipment, based on fiber optics. As the Swedish Armed Forces engaged in its own development of fiber optics, Anders was commissioned to build knowledge in the area and as a result, the Swedish Armed Forces' Technical School FMFS (Försvarsmaktens Tekniska Skola) in Halmstad was founded. It is still operational and employs more than 400 military and civil professionals.

During the 1980's, companies such as SSAB and Statoil became interested in utilizing fiber optics. They contacted Anders who was given the opportunity to employ his knowledge to the civil market. This resulted in the founding of Micropol in 1988. The company grew and in 1996, it moved to its existing location in Åled. The development in fiber optics continued with the introduction of Micropol's own product range and with new, large customers, such as Ericsson and Alcatel.

In 2011, one of Micropol's major products within the defence and security customer segment was launched, the Falcon expanded beam connector. Since then, the Falcon-technology, offering extreme optic performance and the smallest foot-print on the market, is the product of choice for the Swedish Armed Forces. As a result, Micropol has expanded its customer range to several defence and security globals.

"Using Micropol components in our nodes we have secured future quality in network for the inhabitants in Falun. We strongly recommend Micropol to all city network operators who wants to offer the highest speed in their networks."

—Bertil Dikman, project leader at Falun Energi

"Micropol's products help us to increase speed in our computer infrastructure and shorten lead times for support and deliveries. We are really happy with the service and quality provided by Micropol."

— Lisa Tegborg Deij, business area manager at Kungälv Energi

"When we upgrade our network we are moving over to Micropol products. I know that their products have a long lifetime and can provide high speed. The service level is always good and lead times are extremely short."

- Jimmy Ekelund, Net planner at Halmstads Stadsnät AB
