Micropol Fiberoptic AB
Älvdalsvägen 4
313 50 Åled

Phone: +46 (0)35 17 85 39
Mail: info@micropol.com

FEATURES

- Tailor-made
- Future proof
- Insertion loss < 0.3 dB
- Return loss > -55 dB (UPC)
- Return loss > -65 dB (APC)
- Available in HCS 100/140 or 200/230

STANDARD LENGTHS OR CUSTOMIZED SOLUTIONS TO YOUR REQUIREMENTS

Patch cable, patchcord, interconnection cable or fiber cord. All our optical cabling is made in Sweden.

Regardless of length, type of fiber, choice of connectors or cable construction, we manufacture according to your wishes. We have the capacity to manufacture both large and small volumes, using our cables or specific ones provided by you if needed.

TELECOM (TC) OR BLUE LINE (BL)

We are frequently asked about the difference between Blue Line (BL) and Telecom (TC) products.

We use the same fiber and components in manufacturing. And we use the same manufacturing methods and connecting, polishing and attenuating/reflection measurement.

Blue Line products have a performance label on the packaging that gives the limit values insertion loss < 0.3 dB and return loss > 55 dB for UPC as well as verification method.

Telecom products have an ID label on the cabling as well as accompanying measurement protocol with performance for all connectors on the cabling, the measurement values are stored in Micropol's database. So the difference is ID and traceability.

All Multi Mode items are supplied with Blue Line as standard unless measurement protocol is asked for.
